PRODUCT DATA SHEET

FRICITION MATERIAL COMPOSITE:

D9099

PRODUCT DESCRIPTION: D9099 is a composite woven lining manufactured from finely carded yarns of cotton. The weaving construction and resins used provide a dense, tough material which exhibit good resistance to heat and compression under load.

APPLICATION: D9099 is specifically designed to operate in sugar mill centrifuges. It offers long life when mated with quality steel & cast iron mating surfaces. It has a cold dynamic friction coefficient of 0.49 and a hot friction coefficient of 0.43. Additionally, it offers very smooth engagement characteristics and a long wear life. This product is the original "Lion's Paw"® brake lining.

It is offered only in a standard size pad configuration of 9" x 3/8" x 28-1/4" long.

The Lion's Paw product can be used in all manufacturers types of sugar mill centrifuge equipment.
